Command Sourcing is proud to offer everything you need for safer roads and a safer workplace. Whether you're looking for a speed display sign, a speed trailer, a rubber speed hump, or flashing beacons, no one offers more traffic calming solutions for every roadway and budget. These speed display signs are effective in slowing cars down, particularly with

today's highly visual, often distracted drivers. Signs operate based on the feedback loop theory: when we are presented with information about our performance, we tend to notice and improve. Extensive research has proven that feedback loops affect real and positive change on people's behavior. These signs have been shown to slow drivers an average of

10%, usually for several miles. Using speed display signs, you can change the way that motorists drive on your streets. SafePace speed radar signs have been installed across the US, Canada, and Central/South America using both solar and AC power.
